        WINTER: 70°F DB ±2°F

    IF THE OUTDOOR TEMPERATURES ARE HIGHER OR LOWER THAN DESIGN TEMPERATURES ESTABLISHED BY THE CALIFORNIA ENERGY CODE, THERE IS THE POTENTIAL THAT THE INSTALLED HVAC SYSTEM WILL NOT BE ABLE TO MAINTAIN THE DESIRED INDOOR TEMPERATURE. THE INCREASE OR DECREASE OF INDOOR TEMPERATURE COULD BE AS HIGH AS THE DIFFERENCE BETWEEN THE ACTUAL OUTDOOR TEMPERATURE AND THE DESIGN CONDITION.
19. ALL DUCT MOUNTED SMOKE DETECTORS SHALL BE ADDRESSABLE TYPE AND COMPATIBLE WITH FIRE ALARM SYSTEM. DUCT SMOKE DETECTORS SHALL BE PROVIDED, INSTALLED AND WIRED BY FIRE ALARM CONTRACTOR. ENTIRE SYSTEM SHALL COMPLY WITH THE CALIFORNIA MECHANICAL CODE, THE CALIFORNIA FIRE CODE, AND THE NATIONAL FIRE PROTECTION ASSOCIATION.
20. ADHESIVES, SEALANTS AND CAULKS USED INDOORS SHALL NOT EXCEED THE FOLLOWING VOLATILE ORGANIC COMPOUND LIMITS PER TITLE 24, PART 11, SECTION 5.504.
    - METAL TO METAL < 30 GRAMS PER LITER
    - FIBERGLASS < 80 GRAMS PER LITER
    - CONTACT ADHESIVE < 80 GRAMS PER LITER

    - FIRE RESISTANT COATINGS < 350 GRAMS PER LITER
21. HVAC EQUIPMENT SHALL NOT CONTAIN CFC'S OR HALONS PER TITLE 24, PART 11, SECTION 5.508.
22. AT THE TIME OF ROUGH INSTALLATION, OR DURING STORAGE ON THE CONSTRUCTION SITE AND UNTIL FINAL STARTUP OF THE HEATING AND COOLING EQUIPMENT, ALL DUCT AND OTHER RELATED AIR DISTRIBUTION COMPONENTS OPENINGS SHALL BE COVERED WITH TAPE, PLASTIC OR SHEET METAL TO PROTECT THE AIR DISTRIBUTION SYSTEM FROM CONTAMINATION WITH DUST AND DEBRIS.
23. ALL DUCT MOUNTED SMOKE DETECTORS SHALL BE ADDRESSABLE TYPE AND COMPATIBLE WITH FIRE ALARM SYSTEM. DUCT SMOKE DETECTORS SHALL BE PROVIDED BY, WIRED TO FIRE ALARM, AND FOR POWER BY ELECTRICAL CONTRACTOR. DETECTORS INSTALLED BY AND CONNECTED TO UNIT BY MECHANICAL CONTRACTOR. ENTIRE SYSTEM SHALL COMPLY WITH THE UNIFORM MECHANICAL CODE, THE UNIFORM FIRE CODE, AND THE NATIONAL FIRE PROTECTION ASSOCIATION.

GENERAL NOTES:

1. THIS PROJECT IS NEW CONSTRUCTION. THE PLANS AND SPECIFICATIONS INDICATE THE GENERAL EXTENT OF THE WORK BASED ON OWNER PROVIDED RECORD DRAWINGS AND LIMITED FIELD VERIFICATION. CONTRACTOR SHALL VISIT SITE, VERIFY EXISTING CONDITIONS, AND REPORT ANY DISCREPANCIES NOTED TO THE ARCHITECT PRIOR TO SUBMITTING A BID. CONTRACTOR SHALL BE RESPONSIBLE FOR THE DISCONNECTION AND RECONNECTION OF MECHANICAL, PLUMBING, AND ELECTRICAL SYSTEMS NECESSARY TO ACCOMPLISH THE WORK WHETHER OR NOT SPECIFIED AND/OR INDICATED.
2. PLUMBING CONTRACTOR SHALL NOTIFY GENERAL CONTRACTOR TO REPAIR WALL, FLOOR, AND CEILING SURFACES AS REQUIRED DUE TO INSTALLATION WORK.
3. CUTTING OR CORING OF STRUCTURAL MEMBERS OR FOOTINGS IS PROHIBITED WITHOUT THE PRIOR WRITTEN CONSENT OF THE STRUCTURAL ENGINEER AND THE ARCHITECT.
4. CONTRACTOR SHALL VERIFY THAT THE ELECTRICAL CONNECTIONS TO THE UNITS, INCLUDING CIRCUIT PROTECTION, CONFORM TO UNIT LABELS AND MANUFACTURER'S DIRECTIONS. WHERE WIRE SIZES SHOWN ON DRAWING EXCEED MANUFACTURER'S RECOMMENDATIONS, THE DRAWINGS SHALL GOVERN. ALL WIRING SHALL BE PER THE NATIONAL ELECTRICAL CODE.
5. ALL CONTROL WIRING SHALL BE IN CONDUIT. CONDUIT SHALL BE PROVIDED AND INSTALLED BY THE PLUMBING CONTRACTOR.
6. FLASHING AND WEATHERPROOFING AT EXTERIOR PENETRATIONS ARE SHOWN ON THE ARCHITECTURAL DRAWINGS.
7. COORDINATE WITH OWNER ON SPACE REQUIRED AND TIME SCHEDULE FOR DELIVERY OF ALL ITEMS WHICH ARE TO BE GIVEN TO THE OWNER FOR HIS DISPOSITION.
8. FOR ROOF PENETRATIONS WITHOUT CURBS, PROVIDE WEATHERPROOF FLASHING PER SMACNA ARCHITECTURAL SHEET METAL MANUAL AND DRAWING NOTES.
9. LABEL ALL PIECES OF EQUIPMENT WITH MARK MATCHING SCHEDULE OR EQUIPMENT LIST WITH ENGRAVED PLASTIC LABELS WITH MINIMUM 1/4" HIGH LETTERS. LABELS EXPOSED TO WEATHER SHALL BE ENGRAVED BRASS.

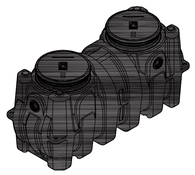
INSTALLATION GUIDE

GB-250 100/200 GPM Great Basin™ Indoor/Outdoor Grease Interceptor



Contents

Part #: 4055-001-02
Find these instructions online at: schierproducts.com/gb-250

SCHIER

913-951-3300 | schierproducts.com

SPECIAL PRECAUTIONS

For Schier Bruce Interceptor Installations – Failure to follow this guidance voids your warranty

⚠ WARNING!! DO NOT AIR TEST UNIT OR RISER SYSTEM
Doing so may result in property damage, personal injury or death.

⚠ CAUTION Do not install this unit in any manner except as described in these instructions.

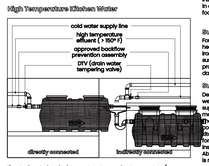
Installation Instructions

Installation instructions and additional components are included with the Interceptor. Read all instructions prior to installation. This Interceptor is intended to be installed by a licensed plumber in conformance with all local codes.

Install Interceptor as close as possible to fixtures being served

Provide at least 18" clearance above unit for routine maintenance.

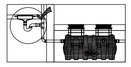
High Temperature Kitchen Water



If water is entering the Interceptor at excessive temperature (over 150° F), a drain water tempering valve (DTV) and approved backflow prevention assembly must be installed. Most state and local plumbing codes prohibit water above 150° F being discharged into the sanitary sewer. Water above 150° F will weaken or deform PVC Schedule 40 pipe, poly drainage fixtures like Interceptors and erode the coating of cast iron (leading to eventual failure).

ODOR ALERT!

Interceptor is not a sewer gas trap. All upstream fixtures must be trapped



ODOR ALERT!

Do not install air gap on outlet side of Interceptor.

Fully Support Base of Unit

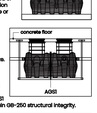
Install unit on solid, level surface in contact with the entire footprint of unit base

Support Inlet and Outlet Piping

For above grade installations ensure heavy inlet and outlet piping (such as cast iron or long runs) is properly supported or suspended during the entire installation process to prevent connection failure or damage to bulkhead fittings.

Suspended Installations

Design trapeze to support the wet weight of the unit. Do not partially support unit or suspend unit using metal U-channel to create a trapeze. The wet weight of the Interceptor combined with high temperature kitchen water creates the potential for tank deformation in suspended installations. In these situations Above Grade Support Kit model AGSI is required to be installed to maintain GB-250 structural integrity.



DO NOT USE CAST IRON COVERS IN ABOVE GRADE OR INDOOR INSTALLATIONS
Use composite cover C24G for above grade installations

SPECIAL PRECAUTIONS

For Schier Bruce Interceptor Installations – Failure to follow this guidance voids your warranty

Secure Cover Adapters

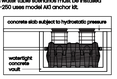
Cover adapters must be secured to base units in above grade installations with increased head pressure conditions. Use cover adapter tie-down kit model ATDK.

High Water Table Installations

Interceptors and risers are not designed to withstand water table height in excess of the top of the unit when buried (see figure). If it is possible for this to occur, install the Interceptor and risers in a water-tight concrete vault or tank with cover. Where possible fill (void) vaults and tanks with sand. Backfill should be poured in stages to avoid crushing the Interceptor). At risk areas include but are not limited to tidal surge areas, floodplains and areas that receive storm water. Great Basin™ models that are direct buried in high water table scenarios must be installed with an anchor kit. Model GB-250 uses model AKI anchor kit.

Hydrostatic/ Pressure Slabs

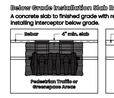
When installed under a hydrostatic slab (slab designed to withstand upward lift, usually caused by hydrostatic pressure) interceptor must be enclosed in a watertight concrete vault.



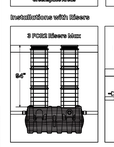
DO NOT COMPACT BACKFILL MECHANICALLY
Compact by hand only

Below Grade Installation Slab Requirements

A concrete slab to finished grade with rebar is required when installing interceptor below grade.



Installations with Risers

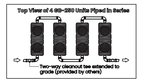


Corrugated Riser Pipe Requirements

Riser adapter model CA2 must be used when installing interceptors using 24" diameter corrugated pipe as a riser. This will adequately embed the cover adaptor in the concrete slab, preventing cover/cover adaptors failure under traffic rated loads.

Series Installations

For lower flow rates and higher grease storage requirements. Piping between units and two-way cleanout tees by others.
NOTE: When the flow control is required, it should only be installed on the first unit in the series.



Rated Grease Capacities for Units Piped in Series

No. of Units In Series	Removal Efficiency 100 GPM	Removal Efficiency 100GPM

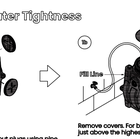
1 Test Tank for Water Tightness

1a

1b

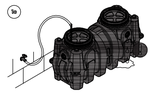


Cap all connection points with 4" cleanout plugs using pipe thread sealant or tape approved for use with plastics.

Remove covers. For base unit testing fill with water to just above the highest connection.

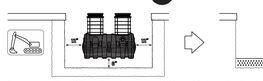
Inspect unit, connections and gaskets for leaks. Check water level at specific time intervals per local code.

1a



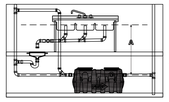
Have a Leak?
Call customer care at 913-951-3300
Hours 8am-5pm CST, M-F

2 Excavate Burial Pit ONLY



Excavate hole at least 12" larger than interceptor on all sides and 6" deeper than tank bottom. Lay a level bed of well-packed, crushed aggregate (approximately 3/4" size rock or sand, with no fines) in the base of hole.

4 Install Inlet Diffuser Components



This unit is supplied with additional components for use in high flow/ increased head pressure conditions.

- If dimension "A" is 13 feet or less, no additional components are needed, go to Step 5, Connect Piping
- If dimension "A" is more than 13 feet, or a high flow/increased head pressure condition exists, follow Steps below.

4a Choose appropriate inlet diffuser component based on flow rate and diffuser size

100 GPM
Install inlet diffuser cover (white)

OR

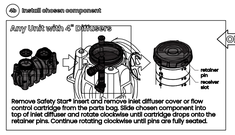
200 GPM
Install flow control cartridge (red) or plate

At 100 GPM this unit is certified to ASME A112.14.3 (Type D) and CSA B483 and does not require flow control. This inlet diffuser cover is provided to prevent the unit from swamping.

At 200 GPM this unit is certified to ASME A112.14.3 (Type C) and CSA B483 and requires internal flow control. External flow control with vent not required.

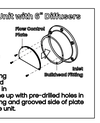
4b Install chosen component

Any Unit with 4" Diffusers



OR

200 GPM Unit with 6" Diffusers

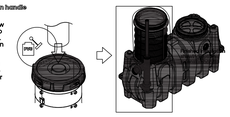


Remove Safety Stor® insert and remove inlet diffuser cover or flow control cartridge from the parts bag. Slide chosen component into top of inlet diffuser and rotate clockwise until cartridge drops onto the retainer pins. Continue rotating clockwise until pins are fully seated.

Before connecting piping and burial, fasten flow control plate to inlet bulkhead fitting using supplied screws. Holes in plate must line up with pre-drilled holes in bulkhead fitting and grooved side of plate must face the unit.

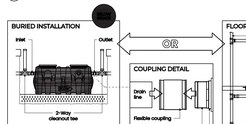
4c OPTIONAL: Install extension handle

For easy inlet diffuser cover or flow control cartridge removal in deep buried installations, 1-1/2" PVC SCH. 40 pipe may used as an extension handle. Before risers have been installed, cut pipe to length and attach to top of cover using PVC primer/cement. Extension handle length should be about 12" shorter than total riser height.



5 Connect Piping

5a Install plain end fittings



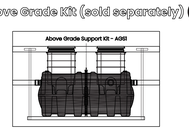
Screw plain end fittings (included) into bulkhead fittings using pipe thread sealant or tape approved for use with plastics. 6" connection types come pre-installed from the factory.

5b Connect Interceptor to drain lines

Place unit into final position and set level. Mechanically couple inlet and outlet drainage lines to unit. Do not exhaust units. Ensure all upstream fixtures are trapped. Vent per local code. Installation of 2-way cleanout tees to grade (by others) is recommended for buried installations.

6 Install AGSI Above Grade Kit (sold separately) ONLY

The wet weight of the Interceptor combined with high temperature kitchen water creates the potential for tank deformation in suspended installations. In these situations Above Grade Support Kit model AGSI is required to be installed to maintain GB-250 structural integrity.



7 Wet or Air Test Piping Per Local Code

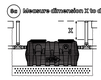
⚠ WARNING!! DO NOT AIR TEST UNIT OR RISER SYSTEM
Doing so may result in property damage, personal injury or death.

Have a Leak? Call customer care at 913-951-3300
Hours 8am-5pm CST, M-F

8 Bring Covers Flush-to-Grade ONLY

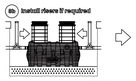
The GB-250 is ready for burial depth of 44" from finished grade to bottom of tank (or 13-1/2" to centerline of inlet). Deeper burials will require extending the cover adapters and possibly adding risers.

8a Measure dimension X to determine riser height needed.



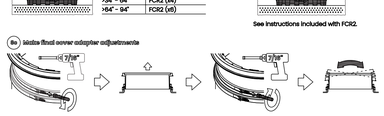
Riser Height Needed	Risers Required
17" – 4"	None (use adapter)
>4" – 13"	FCR2 (x1)
>13" – 9.4"	FCR2 (x1)
>13" – 9.4"	FCR2 (x1)

8b Install risers if required



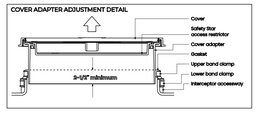
See instructions included with FCR2.

8c Make final cover adapter adjustments

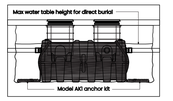


Loosen the cover adapter upper band clamp using 7/16" nut driver bit. Adjust cover adapter heights as needed. Maintain a minimum 3-1/8" insertion depth. Tighten upper band clamp to 5 – 8 ft. lbs. of torque using 7/16" nut driver bit. If required, cover adapters may now be tilted up to 10° in any direction using gasket flexibility.

COVER ADAPTER ADJUSTMENT DETAIL



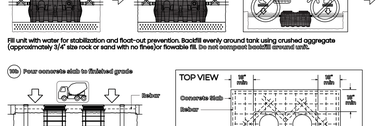
9 Install Anti-Flotation Anchor Kit ONLY



If the installation location is in a high water table or at risk area (including but not limited to tidal surge areas, floodplains and areas that receive storm water) the GB-250 must be installed with Schier model AKI anchor kit.

10 Backfill and Finished Grade ONLY

10a Backfill



Fill unit with water for stabilization and float-out prevention. Backfill evenly around tank using crushed aggregate (approximately 3/4" size rock or sand with no fines/or flowable fill. Do not compact backfill around unit.

10b Pour concrete slab to finished grade

Vehicular Traffic Areas:
Minimum 6" thick concrete slab with rebar required. Thickness of concrete around covers to be determined by specifying engineer. If traffic loading is required the concrete slab dimensions shown are for HS20 (32,000 lb. gross) vehicles only. Concrete to be 28 day compressive strength to 4,000 PSI. Use No. 4 rebar (1/2") grade 60 steel per ASTM A615 connected with tie wire. Rebar to be 2-1/2" from edge of concrete and spaced in a 12" grid with 4' spacing around access openings.

Pedestrian Traffic or Greasecaprox Areas:
Minimum 4" thick concrete slab with rebar required.

3 Set Up Outlet Diffuser and Install Cleanout Plugs

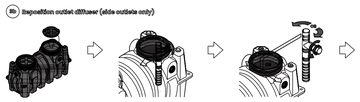
3a Choose outlet location.

Side Outlet:
Go to Step 3b.

OR

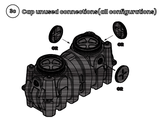
Straight Through:
Go to Step 3c.

3b Deposition outlet diffuser (side outlets only)



Remove Safety Stor® insert, leave tethered to unit. Unscrew diffuser retaining nut and remove outlet diffuser. Rotate diffuser toward chosen outlet, insert and hand tighten retaining nut.

3c Cap unused connections(all configurations)



Screw in provided 4" cleanout plugs using pipe thread sealant or tape approved for use with plastics. Do not cap the inlet or outlet connections attached to the diffusers.

Because of their superior, patented design combined with quality construction throughout, you can expect outstanding performance for years to come. In fact, many STI customers are surprised to find that all this quality is available at no increase in price. Plus, customers appreciate the option to protect the switches with STI protective covers that carry a three year guarantee against breakage in normal use, one year on electro mechanical and electronic components. For indoor applications, you can order your Stopper Station with a pre-alarm cover to help stop malicious and accidental activation.

POWER SONIC BATTERY DATE CODE LEGEND
THE FIRST FIVE NUMERIC CHARACTERS REPRESENT THE MONTH, DAY AND YEAR OF MANUFACTURE (MM/DD/Y).

- FIRST TWO NUMBERS = MONTH (01 TO 12)
- SECOND TWO NUMBERS = DAY OF THE MONTH (01 TO 31)
- FIFTH DIGIT = YEAR (0 TO 9). THIS DIGIT IS REPEATED EVERY 10 YEARS. FOR EXAMPLE, 1 = 2001, 4 = 2004 ETC.

EXAMPLE: 07079 WOULD BE JULY 7TH, 2009. THERE MAY BE ADDITIONAL ALPHA-NUMERIC CHARACTERS AT THE END OF THE DATE CODE. THESE ARE INTERNAL LOT NUMBERS OR INJECTION MOLD NUMBERS AND THEY HAVE NO BEARING ON THE DATE OF MANUFACTURER.

D. EXCEPTIONAL CONDITIONS

The proposed building claims credit for non-mandatory lighting control credits via Power Adjustment Factors (PAFs) as outlined in Standards Table 140.6-A. Review NRCC-PRF-LTI DETAILS Table A to ensure that credit is not claimed for mandatory controls.

This project uses the Simplified Geometry Performance Modeling Approach which is not capable of modeling daylighting controls and assumes the prescriptive Secondary Daylit Control requirements are met. PRESCRIPTIVE COMPLIANCE documentation (form NRCC-LTI-02-E) for the requirements of section 140.6(d) Automatic Daylighting Controls in Secondary Daylit Zones is required.
